

# KONRAD WEHKAMP

## CURRICULUM VITAE

### PROFILE

Master's student in Physics and Technology for Space Applications with a strong focus on spacecraft systems, experimental testing, and hardware-oriented development in laboratory environments.

### LANGUAGE SKILLS

**German:** native speaker **C2**

**English:** fluent **C1**

**French:** basic knowledge **B1**

### IT SKILLS

**Python:** advanced

**C++:** intermediate

**LabVIEW:** intermediate

**CAD (Inventor):** intermediate

**MS Office / LaTeX / Origin:** advanced

**GitHub:** [github.com/konradweh](https://github.com/konradweh)

### INTERESTS

Creative projects (electronics, 3D printing, woodworking)

Field hockey and Bouldering

### VOLUNTEER EXPERIENCE

Coach and organizer of an inclusive hockey team for athletes with disabilities since 2021.

C-level coaching license, responsibility for training and team development.

### EDUCATION

#### Justus Liebig University Giessen

M.Sc. Physics and Technology for Space Applications

Focus on spacecraft propulsion, plasma physics, and space systems engineering

04.2025 – present  
(parallel enrollment)

#### Justus Liebig University Giessen

B.Sc. Physics and Technology for Space Applications

Final grade: 1.9

Bachelor's thesis: Emittance measurements on reference ion sources for electric propulsion characterization (Ref4EP project)

10.2021 – 01.2026

Hands-on work with ion sources, beam diagnostics, and performance evaluation methods

#### Karl-Rehbein-Gymnasium Hanau

German university entrance qualification, grade: 1.7

07.2021

Honors for outstanding achievement in Physics

### RELEVANT PROJECTS & EXPERIENCE

#### GSI HELMHOLTZ CENTRE FOR HEAVY ION RESEARCH

##### Internship

Designed and integrated a cooling solution for analogue electronics used in the SHIPTRAP

Supported the integration and operation of experimental hardware in a high-vacuum and radiation-exposed environment

07.2025 – 10.2025

Performed hands-on assembly, maintenance, and troubleshooting of experimental components, including work on the electron gun at the target area

#### ION THRUSTER RESEARCH GROUP – JLU GIESSEN

##### Student Researcher

Conducted plasma measurements and diagnostics in the context of electric propulsion research

04.2023 – 10.2023

Supported experimental investigations using THz time-domain spectroscopy (THz-TDS)

##### Project Work

Developed a global Python-based model for multi-species plasmas in a small team

10.2024 – 01.2026

Used the model to study plasma behavior relevant to electric propulsion systems

##### Project Work

Developed a Python-based simulation of atmospheric reentry for different space vehicles

10.2025 – 01.2026

Modeled key physical effects including aerodynamic forces, thermal loads, and flight dynamics
